

PSEG Nuclear, LLC
ZEC 2 – Salem II
Docket No: ER20080558

Response to Discovery Request: SII-ZECJ-FIN-0009
Date: 10/1/2020

Question:

Identify and describe any obligations/commitments under which the Unit has operated in the past ten (10) years and/or currently operates regarding the current New Jersey Basic Generation Service (“BGS”) and any PJM markets, including any Reliability Must Run contracts, the duration of such obligations and/or commitments, and supporting documentation and calculations.

Attachments Provided Herewith: NO

Response:

The Hope Creek, Salem 1 and Salem 2 units supply all energy into the PJM day ahead and real time markets. The units do not supply directly to the current New Jersey Basic Generation Service (“BGS”).

In the past 10 years, the Hope Creek and Salem Units have been bid into the PJM energy and capacity markets. The PJM capacity obligations are described in the answer to GAIO-8. Current capacity obligations in PJM’s Capacity Market run through May of 2022.

The unit does not currently operate under any other obligations or commitments. It is not operating and has not operated under a Reliability Must Run (“RMR”) contract in the past ten years.
