To Aida Camacho  
Board Secretary  
New Jersey Board of Public Utilities

**Re: Support for PSE&G Energy Storage Program – BPU Docket No. EO18101111**

I'm writing on behalf of the A.F. Mensah, Inc. Team to strongly support the PSE&G Energy Storage program filing. Our team does not just work in the industry, we are also New Jersey rate payers. From our perspective, the PSE&G program will ensure a better grid for all and spur economic development.

PSE&G will be able to utilize battery storage technology to modernize the grid, integrate emerging and versatile technology into its operations, and connect unrestricted capacity of clean renewable energy. The battery storage program will also help manage costs by reducing electric use at peak times. More importantly, the program will enhance the resiliency of the power grid and keep critical facilities powered during extended power outages. The battery storage program will also provide a reliable environment, in which more jobs, more innovation, and more companies will flourish across the entire clean energy value chain.

It is our hope that the Board of Public Utilities approve this program and helps New Jersey become a national leader and an economic hub in clean energy.

Sincerely,

Adje Mensah  
CEO, A.F. Mensah, Inc.
