Aida Camacho-Welch Secretary NJ Board of Public Utilities P.O. Box 350 Trenton, New Jersey 08625

Re: IN THE MATTER OF THE PETITION OF ATLANTIC CITY ELECTRIC COMPANY FOR APPROVAL OF A VOLUNTARY PROGRAM FOR PLUG-IN VEHICLE CHARGING BPU DOCKET NO.: E018020190

Dear Secretary Camacho-Welch:

Please accept this letter as the reply (the "Reply") to Atlantic City Electric Company's ("ACE") opposition (the "Opposition") to Electrify America's Motion for Leave to Intervene (the "Motion") in this proceeding. By the Opposition, ACE seeks to prevent Electrify America, one of the nation's largest owner/operators of charging stations, from having a full voice in this proceeding, which according to ACE's Amended Petition will support the growth of electric vehicles and the development of electric vehicles in New Jersey.

The Board should hear from a major entity with a strong vested interest in this industry in making fundamental determinations that will shape this industry going forward.

I. ELECTRIFY AMERICA'S INTEREST IS NOT SERVED BY THE OTHER INTERVENORS

In the Opposition ACE states: "Electric Vehicle Service Equipment ('EVSE') providers similar to EA are already well represented by Intervenors in this proceeding. EVgo Services, LLC, Tesla, Inc., and ChargePoint, Inc. already represent companies who are "building a nationwide network of ultra-fast direct current fast charging stations" (as EA describes its operations in the Motion)." This assertion by ACE is simply inaccurate.

Attached to this Reply is the Certification of Robert Barrosa, Director, Utility Strategy and Operations for Electrify America ("Barrosa Cert."). Mr. Barrosa states as follows:

- Electrify America chargers are open to vehicles that can support CCS and CHAdeMO charging standards, and many have the potential to deliver 350 kW to a single vehicle.
- This is significantly greater than the capabilities of the existing intervenors in this
 proceeding, and therefore the implementation of ACE's PIV Program will have a greater
 impact on Electrify America than on the existing intervenors.

- ACE's Amended Petition explained that that it would seek to incentivize customers to install
 electric vehicle supply equipment ("EVSE"), including chargers, and that it would "provide for
 the development of ACE-owned EVSE," which could provide ratepayer-subsidized
 competition, and "support development of EVSE by third-parties," which if properly
 constructed could become beneficial for Electrify America.
- ACE's Opposition fails to appreciate that because Electrify America can deliver significantly
 more power to electric vehicles than the other intervenors in this proceeding, its interests are
 not adequately represented by existing intervenors.
- For example, changes in demand charges will impact Electrify America more than its competitors because of the difference in power that can be supplied by Electrify America to compatible electric vehicles.
- The resulting rate increases from implementation of the 13 Program Offerings, without incentives to offset the increase, will make it more costly for Electrify America to operate in the ACE service territory and have a disproportional impact on Electrify America because of the difference in the amount of power it can supply.
- In comparison, EVgo operates at only 50 kW DCFC in the ACE service area.
- ChargePoint also does not have any DCFC in New Jersey above 50 kW.
- Tesla—a proprietary DCFC charging provider—does not, at present, have infrastructure capable of achieving the same power levels in ACE's service area.
- As a result, our business model is substantially different from the other intervenors.
- Our interests cannot be materially represented by other intervenors when our technology has the potential to incur seven times the demand charges to a single vehicle of our competitors' technology.
- Electrify America's interests are materially unique as a result. (Barossa Cert. at paragraphs 11 to 18)

II. ELECTRIFY AMERICA'S INTERVENTION WILL NOT MATERIALLY IMPACT THE ADMINISTRATION OF THIS PROCEEDING

In the Opposition ACE states: "allowing additional Intervenors . . . at this late stage with full rights to conduct discovery could result in unnecessary confusion and delay of this proceeding." This assertion seems to disregard Electrify America's statement in its Motion that: "Nevertheless, the Movant's intervention will not add confusion to, or otherwise delay, these proceedings in any way. Electrify America will abide by the existing Procedural Schedule." In the attached Certification, Mr. Barrosa also states that Electrify America "would abide by the existing procedural schedule if granted intervenor status." (Barrosa Cert. at paragraph 7)

Electrify America would expect a provision to that affect in any order granting it intervention, and will abide by such a provision.

III. THE BOARD SHOULD HEAR ELECTIFY AMERICA'S CONSTRUCTIVE VIEWS AS TO HOW THE PIV INDUSTRY CAN PROSPER IN NEW JERSEY

The Plug-In Vehicle industry is still a relative newcomer in New Jersey. However, promotion of this industry is consistent with the public policy of this State as is demonstrated in the Energy Master Plan and many pronouncements of this Board. In the Motion Electrify America stated:

"Electrify America's participation in this proceeding is necessary in order for it to present evidence of its unique position in the market and the impact that ACE's petition will have on its business model."

Electrify America, a leader in this industry respectfully requests the opportunity to present evidence which will assist the Board in making its decision in this matter. The BPU should hear Electrify America's evidence, in determining how to assist the development of this vital industry.

This letter and the attached certification are being submitted electronically, consistent with the Board's Order dated March 19, 2020 (Docket No. EO20030254) directing that all submissions to the Board, of any kind, be submitted electronically.

Respectfully,

COZEN O'CONNOR, PC

STATE OF NEW JERSEY BOARD OF PUBLIC UTILITIES

IN THE MATTER OF THE PETITION OF ATLANTIC CITY ELECTRIC COMPANY FOR APPROVAL OF A VOLUNTARY PROGRAM FOR PLUG-IN VEHICLE CHARGING

BPU Docket No.: EO18020190

CERTIFICATION OF ROBERT BAROSSA

Robert Barrosa, of full age, upon his oath, certifies as follows:

- I am the Director, Utility Strategy and Operations for Electrify America, LLC ("Electrify America").
 - 2. I am authorized to make this certification on behalf of Electrify America.
- 3. On February 22, 2018, Atlantic City Electric Company ("ACE") filed a petition with the New Jersey Board of Public Utilities ("Board") requesting approval of its Voluntary Program for Plug-In Vehicle ("PIV") Charging ("PIV Program").
- ACE thereafter filed an Amended Petition on December 17, 2019, in which it detailed 13 Offerings as part of its PIV Program to incentivize and expand the usage of electric vehicles in New Jersey.
- 5. On August 6, 2020, Electrify America filed a Motion for Leave to Intervene in this matter ("Motion"). The procedural history of this proceeding was set forth in the Motion and will not be repeated herein.
- 6. Electrify American's Motion explained its interest in this matter and its background as a company that is developing a nationwide network of direct current fast charging ("DCFC") stations, with charging stations already in place in New Jersey and with plans to expand in the ACE service territory.
- 7. Electrify America's Motion stated that it would abide by the existing procedural schedule if granted intervenor status.

- 8. On August 17, 2020, ACE filed a letter in opposition to the Motion ("Opposition").
- 9. In the Opposition, ACE stated as follows:

Electric Vehicle Service Equipment ("EVSE") providers similar to EA are already well represented by Intervenors in this proceeding. EVgo Services, LLC, Tesla, Inc., and ChargePoint, Inc. already represent companies who are "building a nationwide network of ultra-fast direct current fast charging stations" (as EA describes its operations in the Motion).

- 10. This assertion by ACE is inaccurate.
- 11. Electrify America operates chargers that are open to vehicles that can support CCS and CHAdeMO charging standards, and many have the potential to deliver 350 kW to a single vehicle. This is significantly greater than the capabilities of the existing intervenors in this proceeding, and therefore the implementation of ACE's PIV Program will have a greater impact on Electrify America than on the existing intervenors.
- 12. ACE's PIV Program and 13 Offerings would have a fundamental effect on Electrify America's New Jersey business, including but not limited to, (i) ACE's proposal to provide an off-bill, off-peak incentive of five cents per each kW of net off-peak PIV charging and (ii) ACE's proposal to provide a demand charge incentive to reduce the effective cost of electricity at a set point of twenty cents per kW. ACE's Amended Petition explained that that it would seek to incentivize customers to install electric vehicle supply equipment ("EVSE"), including chargers, and that it would "provide for the development of ACE-owned EVSE," which could provide ratepayer-subsidized competition, and "support development of EVSE by third-parties," which if properly constructed could become beneficial for Electrify America.
- 13. ACE stated that it would seek recovery of the costs of its PIV Program in a future base rate case and that a typical residential customer using 679 kW per month would pay an additional 54 cents per months for the recovery of the PIV Program costs. ACE's proposals include the deployment of electric vehicles and associated charging infrastructure for school buses and New Jersey Transit, which would affect the electric vehicle industry beyond ACE's

service territory and throughout the state, impacting Electrify America's operations in New Jersey even beyond ACE's service area.

- 14. It is undeniable that ACE's PIV Program and 13 Offerings would impact Electrify America's New Jersey operations and Electrify America's plans to expand its infrastructure in the ACE service territory. ACE seeks ratepayer-subsidized competition in its 13 Offerings. Further, there will be additional operating expenses in the form of higher electricity to Electrify America as recovery for the costs of ACE's proposals.
- 15. However, ACE's Opposition fails to appreciate that because Electrify America can deliver significantly more power to electric vehicles than the other intervenors in this proceeding, its interests are not adequately represented by existing intervenors. For example, changes in demand charges will impact Electrify America more than its competitors because of the difference in power that can be supplied by Electrify America to compatible electric vehicles. The resulting rate increases from implementation of the 13 Program Offerings, without incentives to offset the increase, will make it more costly for Electrify America to operate in the ACE service territory and have a disproportional impact on Electrify America because of the difference in the amount of power it can supply.
- 16. By contrast, EVgo operates at only 50 kW DCFC in ACE's service area, ChargePoint does not have a single DCFC in New Jersey above 50 kW, and Tesla similarly does not have the infrastructure capable of achieving the same power levels in ACE's service area. Also, Telsa's equipment is proprietary to Tesla vehicles.
- 17. As a result, Electrify America's interests cannot be materially represented by other intervenors when our technology has the potential to incur seven times the demand charges to a single vehicle of our competitors' technology. Our business model is substantially different from the other intervenors.

18.	Therefore, Electrify America's interests are materially unique in this proceeding
and Electrify	American should be granted intervenor status in order to represent its own
interests and	d the impact ACE's PIV Program and 13 Offerings would have on Electrify America

Dated: August 20, 2020
