EXHIBIT A (Continued)LIMITATIONS ON WASTEWATER DISCHARGES

Constitute a rate of discharge sufficient to be classified as a “slug discharge”, or containing such concentrations or quantities of pollutants that would cause an interference to the wastewater treatment system.

Any water or wastes containing toxins or pollutants in sufficient quantity and/or concentration to cause injury, damage or hazard to personnel, structures or equipment, or interfere with the wastewater treatment system or any portion of the liquid or solids treatment or handling processes, or that will pass through the wastewater treatment system in such condition that it will not achieve State, Federal or other existing requirements for the effluent or for the receiving waters.

Any material which exerts or causes:

- A. Unusual concentration of inert suspended solids (such as, but not limited to, Fuller’s earth, lime slurries and lime residues) or of dissolved solids (such as, but not limited to, sodium chloride and sodium sulfate).
- B. Any water or wastes containing dyes, pigments or other colored substances that will not be removed in the wastewater treatment system and will interfere with effluent color or turbidity measurements.
- C. Unusual BOD, COD, or chlorine requirements in such quantities as to constitute an unacceptable load on the wastewater treatment works.

SECTION 1.1

No person shall dispose of wastes from septic tanks, cesspools, or other such sources of sanitary waste to the system without the prior written approval of the Company and in accordance with all conditions imposed by the Company on such disposal.

SECTION 1.2
