## About the survey activities

**Geotechnical operations:** These surveys collect soil samples from the seafloor down to approximately 100 feet below the seabed that are analyzed to determine the composition of sediments in specific locations. Analysis of the data is used to inform engineering and identify any potential culturally significant areas.

## About the Mid-Atlantic wind farms

**Ocean Wind 1 (OCW01)** is a 75/25 JV with PSEG, is a planned offshore wind farm located 15 miles off the coast of southern New Jersey.

**Ocean Wind 2 (OCW02)** is a planned offshore wind farm located off the coast of southern New Jersey, adjacent to the OCW01 project.

**Skipjack Wind (SJW)** is a planned offshore wind farm located 19 miles off the Delmarva Coast able to deliver clean energy to the Maryland electrical grid.

## Vessels

**Liftboat SD-50**

**Activity Type:** Geotechnical surveying\*

**Project:** Ocean Wind 1

**Flag:** USA

**IMO/ON:** n/a
