To whom it may concern.

I like to cook my dinner on my gas range. Renewable energy is unreliable and costs consumers more for electricity.

I like to be able to drive my gasoline-powered car because it works, is affordable, and I know I can still find a gas station when I need one. Government must not be in the business of telling me what vehicles I can or cannot buy.

And I want to make sure that whatever decision you make, that the lights will still turn on when I get home from working all day and that I will be able to afford the bill when I get it in the mail.

Can you please develop a sensible plan that uses reliable, economical energy sources? And let's make sure our electric grid is secure against terrorist hackers and hardened against an EMP attack!

Thank you

Thomas Zvolensky
