

NJ BPU Docket No. QO24020126 -
New Jersey Energy Master Plan Comments
March 13, 2025

- We support the responsible development of offshore wind, much needed solar generation, and more clean electricity generation for better air quality and public health in New Jersey
- We need more electricity because of supply and load and pricing issues due to the volatility of fossil fuel pricing. New Jersey can take control of this energy affordability issue by generating more clean power
- We support a New Jersey Energy Master Plan that moves into the direction of 100% clean electricity by 2035
- The most affordable option for New Jersey is clean generation
- We support full electrification of the transportation and buildings sectors
- We support the Advanced Clean Trucks and Advanced Clean Cars II programs
- New Jersey's clean energy transition must prioritize clean energy accessibility and an equitable transition
